Our Team

Ali Furkan KAMALI
General Manager
Electrical Electronics Engineer

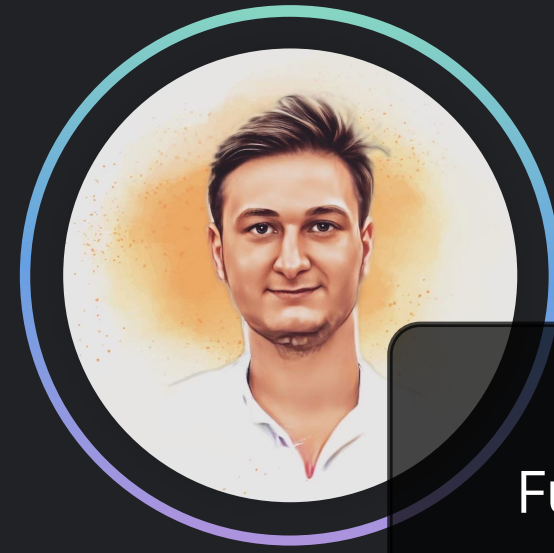

Umut SERT
R&D and Innvation Leader
Electrical Electronics Engineer

Akif Tayfun HEREN
Business Development
Mechanical Engineer

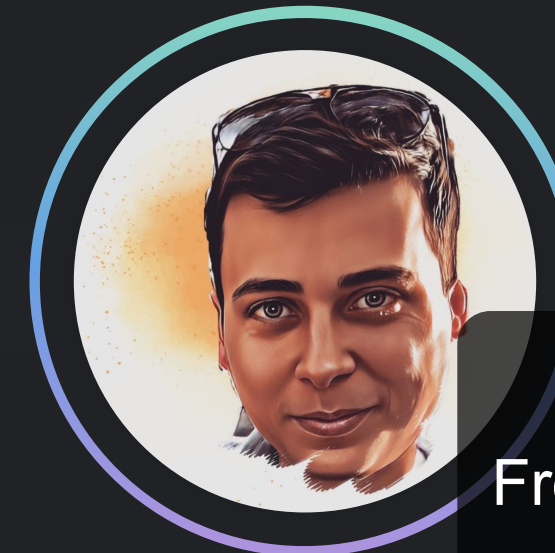

Ömer ŞAHİN
Full Stack Developer

Cihat ŞENGÜN
Full Stack Developer

Hüseyin GÖÇER
Art Director

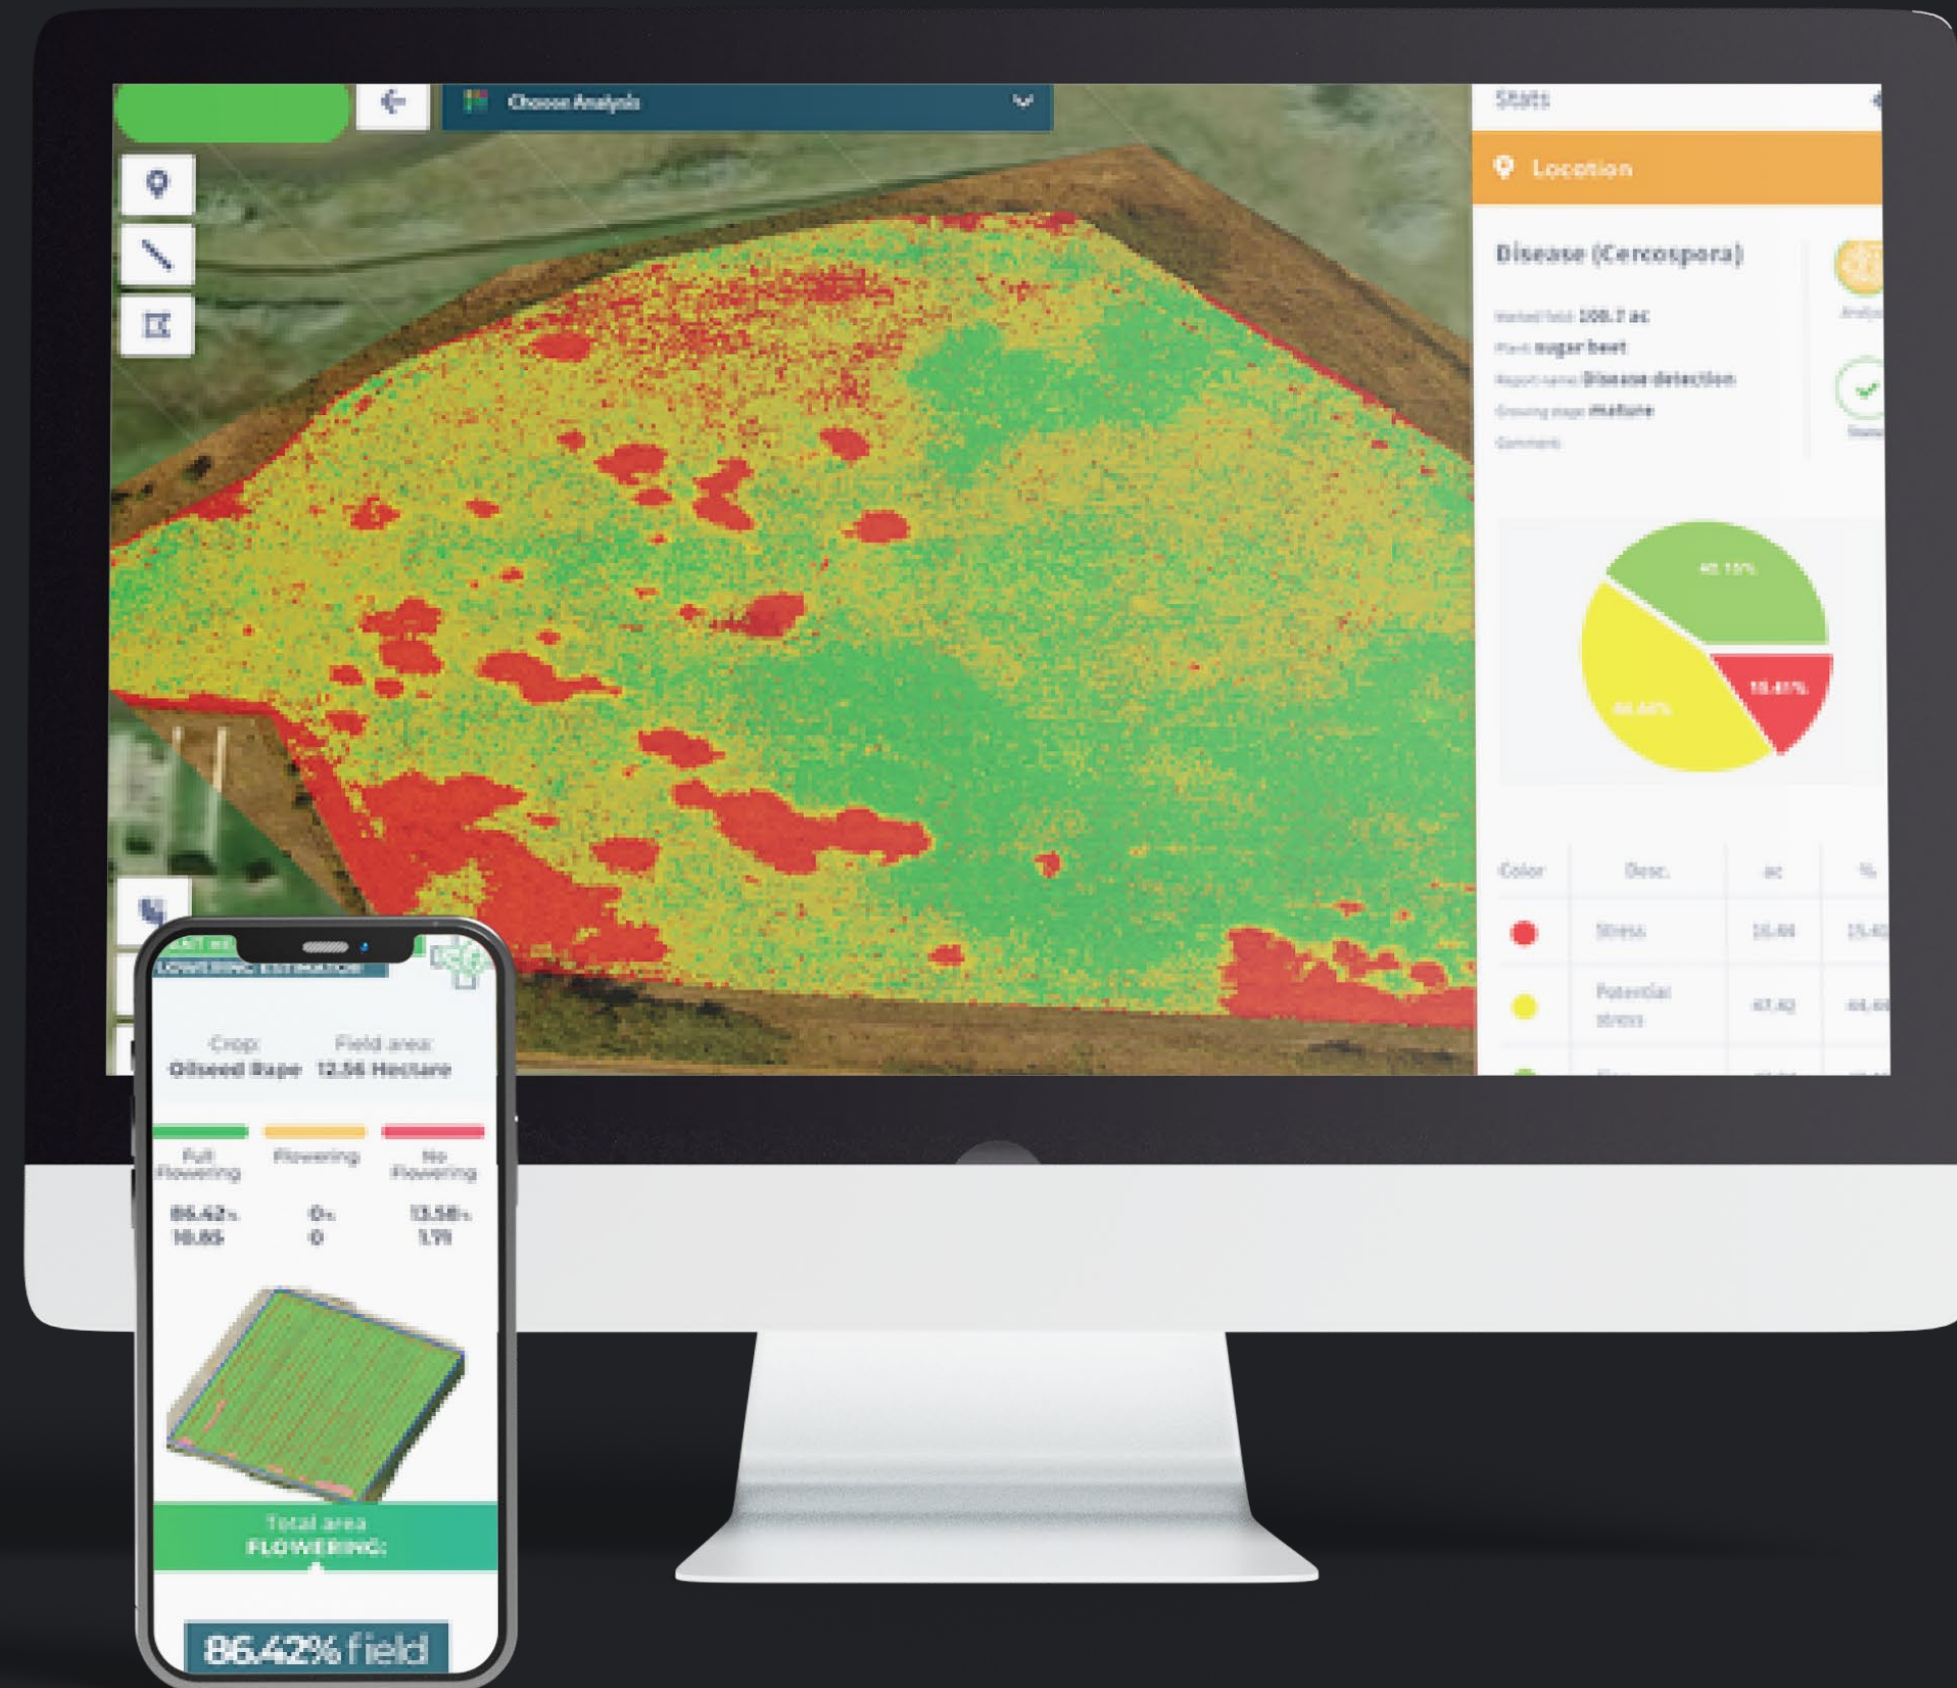

Hakan SALTAN
Frontend Developer

SUBJECT AND PURPOSE OF THE PROJECT

DEVELOPMENT OF AI- ASSISTED ANALYSIS SOFTWARE FROM SATELLITE AND DRONE IMAGES IN AGRICULTURE FOR INCREASING THR PRODUCT YIELD

PROJECT AIM

Our cutting-edge entrepreneurial project aim to be able to leveraging artificial intelligence to develop advanced software that utilizes both RGB and multispectral images captured from satellite and drone technology, specifically for use in agriculture. Our software is capable of analyzing a variety of critical factors including harvest periods, plant growth, yield estimations, moisture levels, plant health, plant density, and leaf area. With the aid of our innovative software, farmers and agricultural professionals can make informed decisions and optimize crop yields, ultimately leading to increased profitability and sustainability in the industry.

Material and Methods

Systems to be used in the development of the analysis system

METHOD

- Artificial intelligence
- Data analysis
- Deep Learning
- Orthomosaic Imaging
- 2D Mapping

TOOL

- RGB Drone
- Multispectral Drone
- Satellite

MOTIVATION

- Developing sustainable farming practices
- Reducing dependency on external software
- Water scarcity
- Increasing Population
- 2023 and 2050 targets of our country

BENEFITS

- Increasing crop yield and quality
- Reducing the use of chemicals
- Estimating annual yield
- Saving water
- Training of qualified personnel
- Developing value-added products in line with the national technology move

INNOVATIVE

- Artificial Intelligence Based
- Phytosanitary Analysis
- Developing Plant Type-Specific Big Data Infrastructure and Algorithm
- Development of Customer-Specific Analysis Systems
- Artificial Intelligence Based Anomaly detection
- Creating a visual-based decision support system
- for farmers

Plant Count and Density

Plant Health

2D Mapping

PRODUCT

- Plant Health
- Plant Growth Analysis
- Determination of the Harvest Period
- Moisture Analysis
- Tassel Count
- Plant Density Analysis
- Yield Forecast
- Plant Area Analysis
- Mapping

TECHNOLOGY AND METHODS TO BE USED

TECHNOLOGIES

- Satellite and Drone, Photography Systems
- Data Processing, Data Replication and Data Analysis Structures
- Multispectral analyzes such as NDVI, NDRE, MSAVI
- Deep Learning Based Object Classification, Object Detection and Object Segmentation models
- Large Visual Imaging Systems

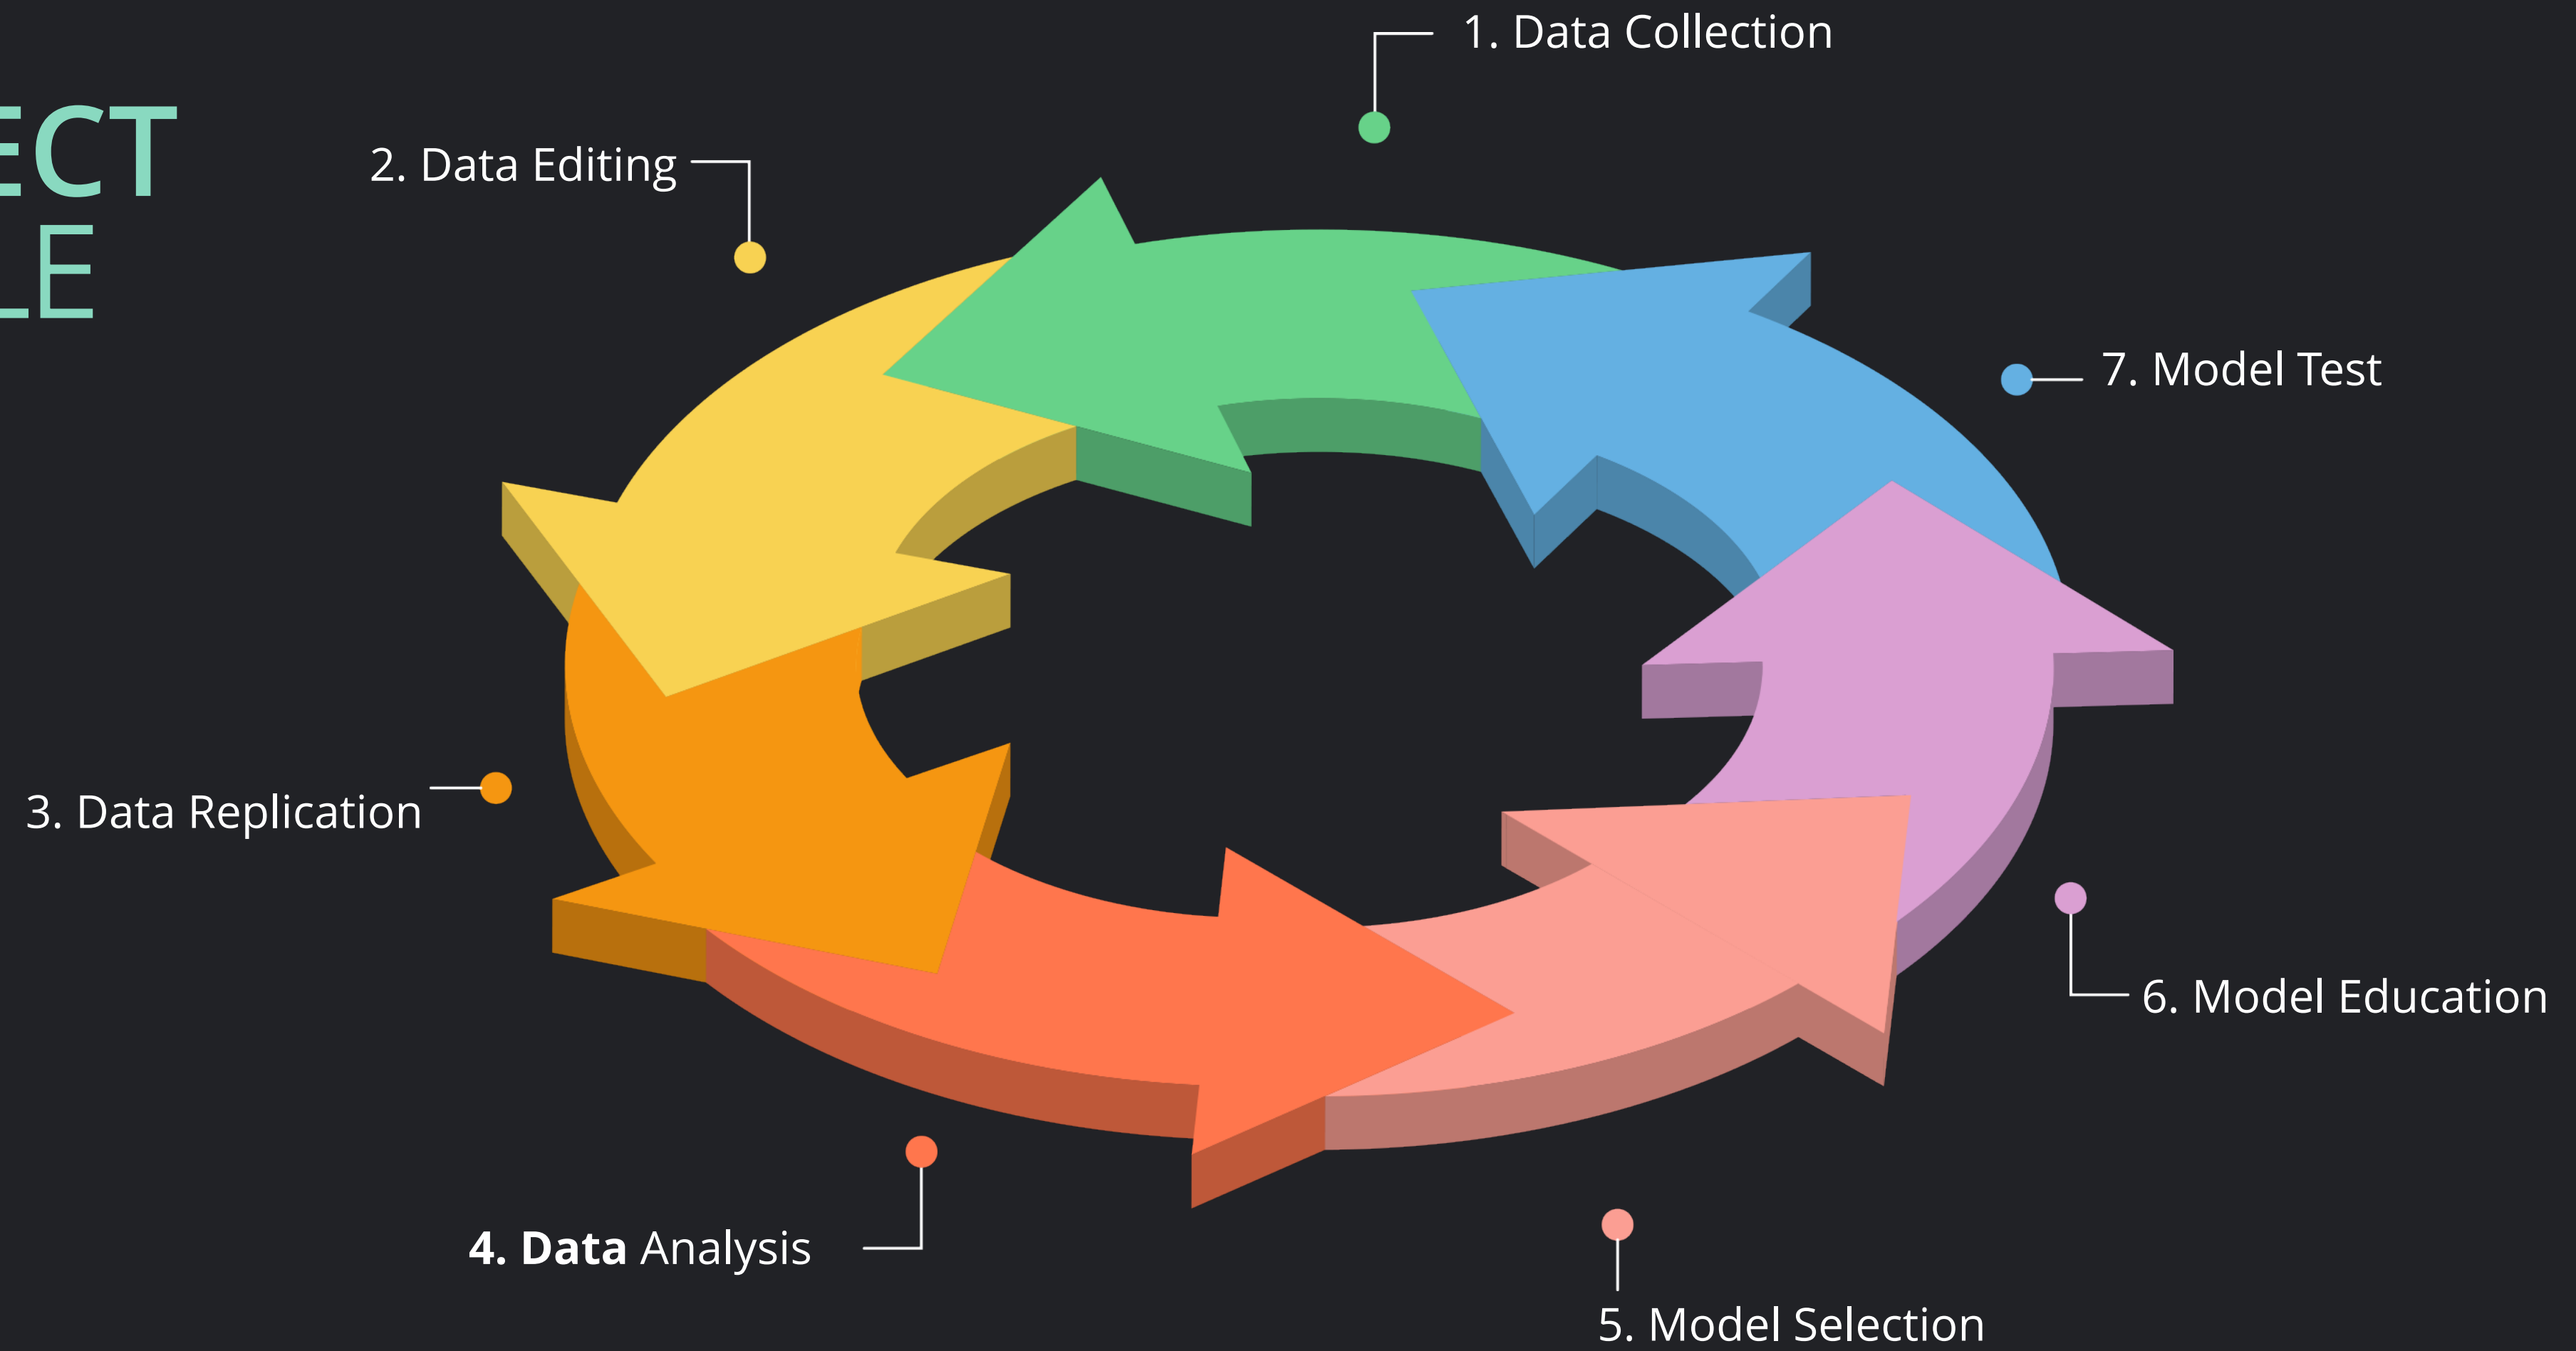

METHODS

- 2D Mapping, Image Fusion
- Artificial Intelligence Project Lifecycle
- Data collection and analysis
- EDA Creation
- Creation of interface and web-based environments for deployment
- Plant Density Analysis

TECHNICAL TOOLS

- Trello
- Agile Project Management
- github
- CloudShare
- Python, JavaScript, HTML, CSS
- Languages OpenCV, Pytorch, Tensorflow,
- Numpy, Pandas Libraries

AI PROJECT LIFE CYCLE

▶ The Need For Artificial Intelligence

Use of agricultural index required the development of the project

NDRE

NDVI

MSAVI

INDEX

(NDVI) Normalized plant difference index
(NDRE) Infrared normalized plant difference index
(MSAVI) Modified soil difference index

RED

NIR

GREEN

RE

APPLICATION

Phenotyping, Water stress, Soil moisture
Crop yield, Biomass, Disease
Crop yield, Biomass, Water stress

▶ The Need For Artificial Intelligence

Multispectral artificial intelligence test results

Image

Mask

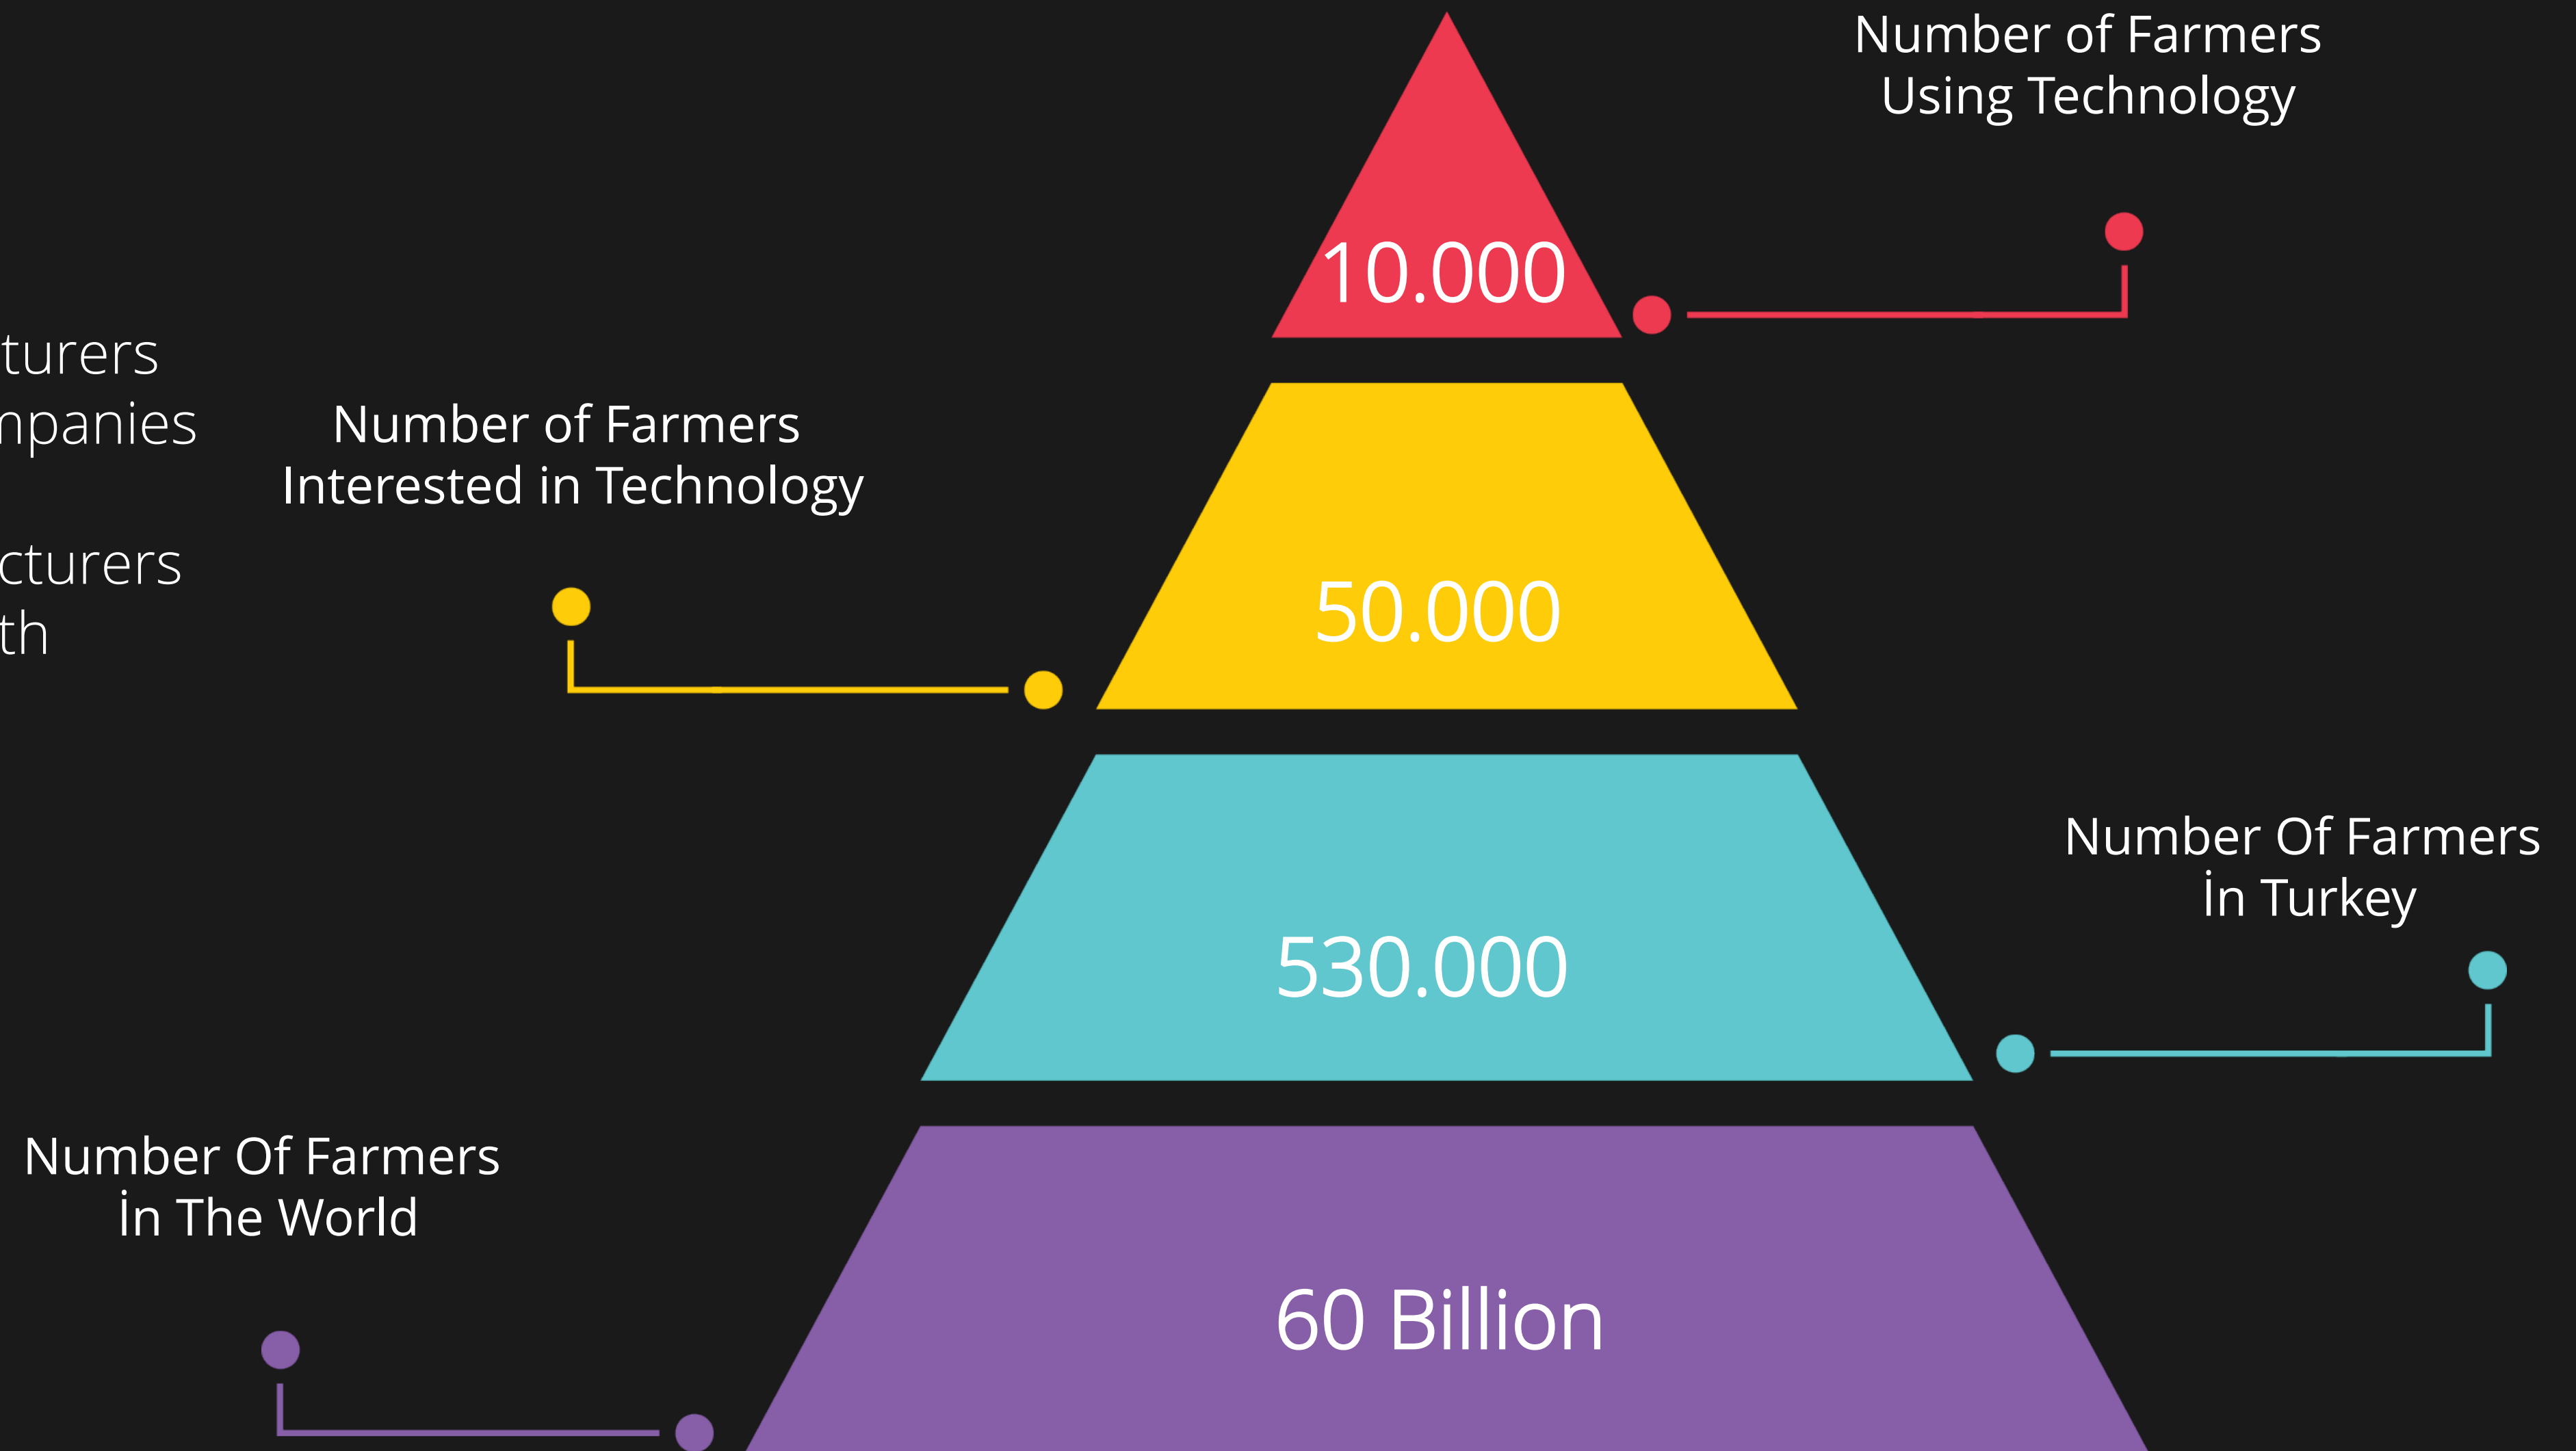

Prediction

▶ Target Customers and Market Size

- Seed producers
- Fertilizer manufacturers
- Pharmaceutical manufacturers
- Industrial agriculture companies
- Farmers
- Agriculture dron manufacturers
- Companies that spray with drones

▶ Our aim of Licensing

At the end of the Project, the products will be Presented as a package and transferred to the customer.

STARTER PACKAGE

1.500 ₺ / Month

- ✓ Data visualization
- ✓ Plant count
- ✓ Mapping
- ✓ Plant health
- ✓ Moisture analysis

BUY

MEDIUM PACKAGE

3.000 ₺ / Month

- ✓ Starter package features
- ✓ Data analysis
- ✓ Plant density analysis
- ✓ Tassel count
- ✓ Determination of harvest time

BUY

EXPERT PACKAGE

4.500 ₺ / Month

- ✓ Medium package features
- ✓ Data support advice
- ✓ Yield forecast
- ✓ Plant area analysis
- ✓ Plant growth analysis

BUY

▶ Sales Targets 3 Years of Projection

3 years of Domestic sales- International sales targets

▶ 5 Year Business Plan Projection

2011

Teknofest competition team establishment

2020-22

7 competition and 1 prize and 6 different category in first 10

2023

Maize and sunflower based analysis

- Planet health
- Planet growth analysis
- Determination of the harvest Period
- Moisture analysis
- Yield forecast
- Plant area analysis

Web based online analysis system deployment

2025

- Drone integration of platform
- Local pesticide spraying application for drones
- Integration through platform

2022

2022 Start-up establishment
2022 KOGEB entrepreneurship project

2024

- Wheat beet and rice analysis
- Disease detection research and AI model development
- Web based decision support system for agriculture

2026

- Fruit and vegetables analysis
- Yield analysis
- Decision support system development
- Agriculture hyperSpectral drone development
